The Great Brain Robbery: What Everyone Should Know About Teenagers And Drugs

Synopsis

Valuable information for adults and adolescents about the high number of emerging drugs and the history and sources of these drugs are neither oversimplified nor exaggerated. This straightforward look shares important information into how the brain works and why drug use is so devastating and harmful to adolescents, including clear and concise explanations of even the most difficult scientific concepts behind drugs; how they affect the brain as well as the acute and chronic side effects they have on the body. The result is a book filled with sobering facts, figures, and tangible scientific data on a subject where a lack of proper knowledge has powerful ramifications. This new edition is updated with information on designer drugs "P" and "E," GBH, and herbal highs.

Before I even started reading this book, I did some research on the authors. The thing that amazes me the most is how Mr. Scott and Mr. Grice have been crucified on the Web for their beliefs, mostly by people who haven't even read THE GREAT BRAIN ROBBERY. Tom Scott is an award-winning journalist, cartoonist, columnist, documentary filmmaker, screenwriter, and playwright. Trevor Grice is the director of the Life Education Trust, a lecturer, drug counselor, industry advisor, and public speaker who often lectures at schools throughout Australia and the United States. And yet these men have been touted as anti-drug idiots, men who know nothing about drugs and teenagers, and two men who are out to "get" those who choose to use illegal substances. I'm guessing that the

people who spew this nonsense are either users of drugs themselves, or just so uninformed that they think what they're saying is believable. Pick up a copy of THE GREAT BRAIN ROBBERY, though, and you'll find that Mr. Scott and Mr. Grice have done their homework. This isn't just a book that harps on the dangers of using illegal drugs. The authors provide evidence--medical, scientific, and true-life examples--of how using these illicit substances can damage you. Can damage, especially, the growing muscle that is the brain of a teenager. In this day and age, it isn't just enough to place "Say No To Drugs" banners in schools; it's not just enough to send D.A.R.E. police officers to talk to elementary students. Today's teens are smart, and given the proper information, they can make informed decisions.
