## **Customer Reviews**

I guess this was a satisfactory beginners guide but it didn't go much beyond that and the PHP code examples given in steps in the book differed from the completed code in the Appendix. I was a little disappointed.

This book was a bit of a "reintroduction" to PHP. I have used PHP in the distant past but have been using ASP.net somewhat more recently. The explanations were carefully written and the code example(s) were well crafted. I would say that some basic knowledge of HTML is certainly required and that one should know the basics of how a page is processed on a web server. Once you read this simple "Quick Start Guide" you are well equipped to delve into PHP and its' extensive preprocessing capabilities. My sincere thanks to the authors!

This is a very interesting book for Beginners who'd like to discover what-the-heck PHP is and how it might apply to you. I learned that it is all about Web development, esp. In the area of blogs! Since I went in knowing absolutely nothing, not even what the acronym stands for, I am very impressed.

I have a CIS degree and PHP is a very sought after skill in my field. I literally had one course that taught PHP so I've been looking to brush up on this skill. I found this book to be simple to under and everything was very well explained. This is a really good guide for beginners.

I m quite new to PHP programming.thats why I picked up this book to help me further my knowledge. I did a little programming and coding when I was still studying, but that was a long time ago. But that has helped me with this book. It is quite easy written, a real quick start guide indeed. You need to have a bit of prior knowledge about the subject, but not a whole lot.This was a great book, really handy to have laying around. To whom would I recommend this book? To everyone interested in PHP and wanting to further their knowledge about the subject.

In today's society, it's hard for most people to imagine life without personal computers and the Internet. Public access to the Internet may be responsible for more changes in the way we carry out our day-to-day lives than any other event in history. Today, businesses without websites are rarities, as are people in the free world that don't spend at least part of their day using the Internet for one purpose or another.
